Fresenius Kabi invests in a new EPR compliance system *Global healthcare specialist partners with Lorax Compliance*

Rugby, England – March 2015

Fresenius Kabi, the global healthcare company, is implementing a new compliance system from Lorax Compliance, which will ensure the company meets its Extended Producer Responsibility (EPR) reporting obligations.

The new system, using cloud-based technology, is able to collate and analyse data gathered from across Fresenius Kabi's global manufacturing base, related to the company's products and associated packaging. By combining product packaging bills of material (BOMs) with country-specific sales data, the software will fully automate the EPR reporting process.

Fresenius Kabi is initially using the unique software solution from Lorax Compliance, a leading environmental compliance specialist, to ensure packaging compliance in Germany, where the healthcare company is located. The system fully automates the processes of fee calculation, which is based on weight of packaging materials put on the German market, significantly easing the process of regulatory compliance. With the data uploaded and the global scope of the system, Fresenius Kabi will be able to potentially use the software to calculate its reporting and fee obligations in any country worldwide.

Edwin de Lepper, IT solution architect at Fresenius Kabi, explains why such a system is important: "Achieving EPR compliance is an important part of governance for any manufacturer and extracting and managing the required data from a global manufacturing base is exceptionally complex. Using the Lorax system means we have a modern solution that will automate much of the work for us, making the process much simpler and quicker than it has been previously."

Lorax's compliance software is based on the Amazon Web Services (AWS) platform and is licensed as Software as a Service (SaaS). AWS provides a secure and scalable hosting technology and enables customers to access the system via a multitude of devices, including tablets. In addition to EPR compliance, Lorax also provides consultancy services, helping businesses to stay on top of complex global EPR regulations.

Graham Margetson, CEO of Lorax Compliance, adds: "Environmental compliance is a critical part of a manufacturer's operations; non-compliance is not a realistic business option. We're delighted to be working with Fresenius Kabi. Although we are a relatively new company, albeit with 20 years' experience in environmental compliance, working with such a global company stands as testament to the functionality and usability of the Lorax system and the quality of our people."

About Lorax Compliance

Lorax Compliance is a leading provider of global product environmental compliance solutions comprising industry-leading software, data collection services and practical down-to-earth consulting.

By offering turnkey compliance solutions, Lorax Compliance automates regulatory systems and business processes by providing the best software tools and the most robust data allowing customers to reduce risk and meet growing worldwide environmental compliance requirements.

Lorax Compliance delivers Cloud-based Environmental Compliance Services to companies which must comply with national waste directives on Packaging, WEEE and Batteries.

Protecting the Environment through Product Stewardship

Lorax Compliance is a technology based company with a customer service oriented culture. We work with companies that share our belief in working to protect the planet's finite resources by minimising the impacts from product manufacture and use to humans and the environment.

To assist customers in achieving their regulatory and environmental goals, Lorax Compliance offers a comprehensive suite of software and services that help major international companies manage their environmental footprint. We also believe firmly in our ability to support internal change.

Lorax Compliance works closely with the Woodland Trust and dedicates a tree for every new customer.
